Watershed & Us Reviews

I will try harder to help the earth.

Thank you for teaching us about watersheds and waterbodies and how to take care of them so we can have a better earth some day!

Thank you for teaching us in a fun, and productive way about watersheds! It was really fun.

It (the science day presentation) really helped me on my MCAS.

Thank you because now I know what a watershed is.

Thank you for teaching us all about watersheds and how not to pollute the earth.

I had lots of fun at the program. It's super fun! From seeing how polluting the earth can hurt the earth in so many different ways. I am going to try to help the earth by picking up trash in my yard and woods ... It was super fun having you come.

You're changing the world. We all said you're unbelievable.

We learned very much. It was fun we got to put our input on the diorama.

It had a huge effect on me.

I learned loads about pollution, watersheds, waterbodies, point and non-point pollution and loads of other stuff that can affect our environment. That presentation was also amazing and intriguing. You've given me more to think about.

Thank you for teaching us about what can happen to waterbodies if we don't take care of them. Thank you for bringing that awesome diagram about a water body.

I thought the presentation was excellent. It makes me want to sue people that pollute.

Thank you for the presentation. It helped me on my test. It was very interesting learning about watersheds. (It) made me think twice about polluting. Even though we are learning I still had a lot of fun. My favorite part was learning about how to keep our environment safe.

It (the presentation) helped prepare me to talk to my family about pollution.

Thank you for the extremely important facts about the watershed. It taught me something I didn't know about in fact I didn't even know it existed. Everything was explained so clearly. I liked how you used an actual model for your demonstration. ...How all those things can pollute the water without even knowing... from now on I will pick up my dog's poop....I will ask my parents to check their cars every year.

I was very fascinated by the way you showed how pollution flows into water sources by point and non-point sources. This presentation also helped a lot with MCAS testing because there were lots of questions revolving around watersheds.

I was especially happy about learning about how to stop pollution. Now I can try to stop pollution from happening.

I liked the fact that you let us do everything hands on instead of doing it all by yourself. Before your presentation, I didn't even know what a watershed was.

Thank you for teaching me how I can not pollute the water as much.

I now know some point and nonpoint water pollution sources.

I didn't know that storm drain water doesn't get treated. What you said made me think a lot about the environment

I love how it was a hands-on experience, not a boring power point presentation. I was particularly interested that water from storm drains is not cleaned before heading back into a waterbody. The diagram helped me become more aware of pollution

I never knew that when it rained all the road salt and dog poop went into nearby waterbodies and polluted them. I think the presentation got all of us aware in an imaginative fun way.

I was interested in where the water goes after it goes into a drain. You made everything easy to understand like what surface water is.

I know a lot about pollution and how organisms can die if we pollute.

I liked your presentation because it was fun and full of learning.

I had no idea about point and nonpoint sources but now I truly do! It was really interesting how you made the presentation seem so real by the way you did it. It helped me learn more about pollution in a fun way. The watershed presentation was very cool, especially when you turned a blank canvas into an entire town.

Everybody was talking about it after. It is good that we know about what is going on because i hate being clueless.

I was specifically interested in the detailed information you gave us on how pollution to the water doesn't only harm the animals in the water but the ones that eat those animals too including us.

I liked getting to spray the model with the water to see how much pollution there was. This gave me a better understanding of why pollution is so bad.

I was specifically shocked by how the pollution in a small place can travel and spread into large bodies of water, and how the pollution can affect many animals as well as the water. I was also relieved to hear about a few ways to reduce the amount of pollution. It was amusing to help out with your presentation by putting items in positions and "making it rain". I am sure I shall remember this for quite some time.

My favorite part was when we learned about how to handle pollution because I want to be able to see my children and grandchildren be able to go camping run and play outside and breath clearly. I can be aware now of what I watershed is now. You were doing a great job on making learning fun. I enjoyed it a lot.

I loved watching everyone makeup our own watershed too. I can't wait to learn more and more about watersheds.

I was very interested in the ways we pollute and we don't even know it.
